

IMC Barometer

RISK LEVELS AND CORRESPONDING MEASURES AT IMC KREMS

The current situation at IMC Krems is continuously evaluated. Both the reporting as well as the contact tracing runs via the general COVID-19 contact point at IMC Krems:

info@fh-krems.ac.at

The IMC Barometer provides a risk assessment for our University of Applied Sciences and ranges from green (low risk) to yellow and orange (medium or elevated risk) to red (high risk).

The classification is carried out by the crisis management team of IMC Krems. Characteristics such as the number of current (and suspected) cases, the origin of the cases (contact tracing) and the number and characteristics of possible clusters are evaluated. The Federal Government's "Corona-Ampel" is also included in the decision.

Clear measures have been assigned to each risk level which will take effect as soon as the situation at IMC Krems changes.
